```
Question 1
Correct
Mark 1.00 out of 1.00
```

Given two strings find the length of the common longest subsequence(need not be contiguous) between the two.

Example:

- s1: ggtabe
- s2: tgatasb

s1	а	g	g	t	a	b	
s2	g	х	t	X	а	У	b

## The length is 4

Solveing it using Dynamic Programming

## For example:

Input	Result
aab	2
azb	

Answer: (penalty regime: 0 %)

```
#include <stdio.h>
     #include <string.h>

 4 v int longestCommonSubsequence(char *A, char *B) {
 5
          int m = strlen(A);
          int n = strlen(B);
 6
 7
          int dp[m + 1][n + 1];
 8
